

SAL HEAVY LIFT

WE INNOVATE SOLUTIONS

ABOUT SAL

SAL Heavy Lift is a world leading carrier specialized in sea transport of heavy lift and project cargo.

We operate a global network of own offices and representatives. This enables us to quickly provide excellent solutions to our clients. Thanks to our longtime experience, integrated best practices in QHSE and our highly trained crews, we provide safe, innovative, reliable transport solutions.

Our in-house engineering department develops customised solutions for all transport needs and thoroughly supervises all projects from the planning stages to successful completion while working hand in hand with our crew onboard.

SAL Heavy Lift upholds the highest standards in respect of QHSE: all vessels are certified to ISO 14001 and OHSAS 18001. Type 183, 176 and 116 have Environmental Passports confirming this compliance.

**It is our ambition and mission
to provide safe and reliable
heavy marine transport services.**

GLOBAL SERVICES

SEMI-LINER SERVICE

SAL offers a Semi-Liner Project Service for the transportation of heavy lift, break-bulk and project cargoes on several routes:

- Between Europe and Far East, we call ports en route including the Black Sea and Persian Gulf when required.
- Our Africa service connects Europe and the African continent with Gulf of Guinea/West Africa as regional hub. We offer round trips via the Cape and shipments to and from Asia and the Persian Gulf.
- Our Americas service offers transport of project and break-bulk cargo Trans Atlantic to/from Europe and Africa as well as cross Pacific to/from Asia. We also offer shipments between North America and South America (East/West Coast) in cooperation with group partner Intermarine.

Our Semi-Liner Shipping Services have continuously developed over many decades. With regular sailings, short transit times and our reliable services, we connect ports around the world. In addition, our fleet of heavy lift vessels, equipped with advanced lifting gear, can operate in remote or small ports, independently from port infrastructure. Our vessels are also perfectly suited for off-shore loading and discharge operations.

We offer innovative solutions for our globally active customers.

MAIN SERVICE ROUTES

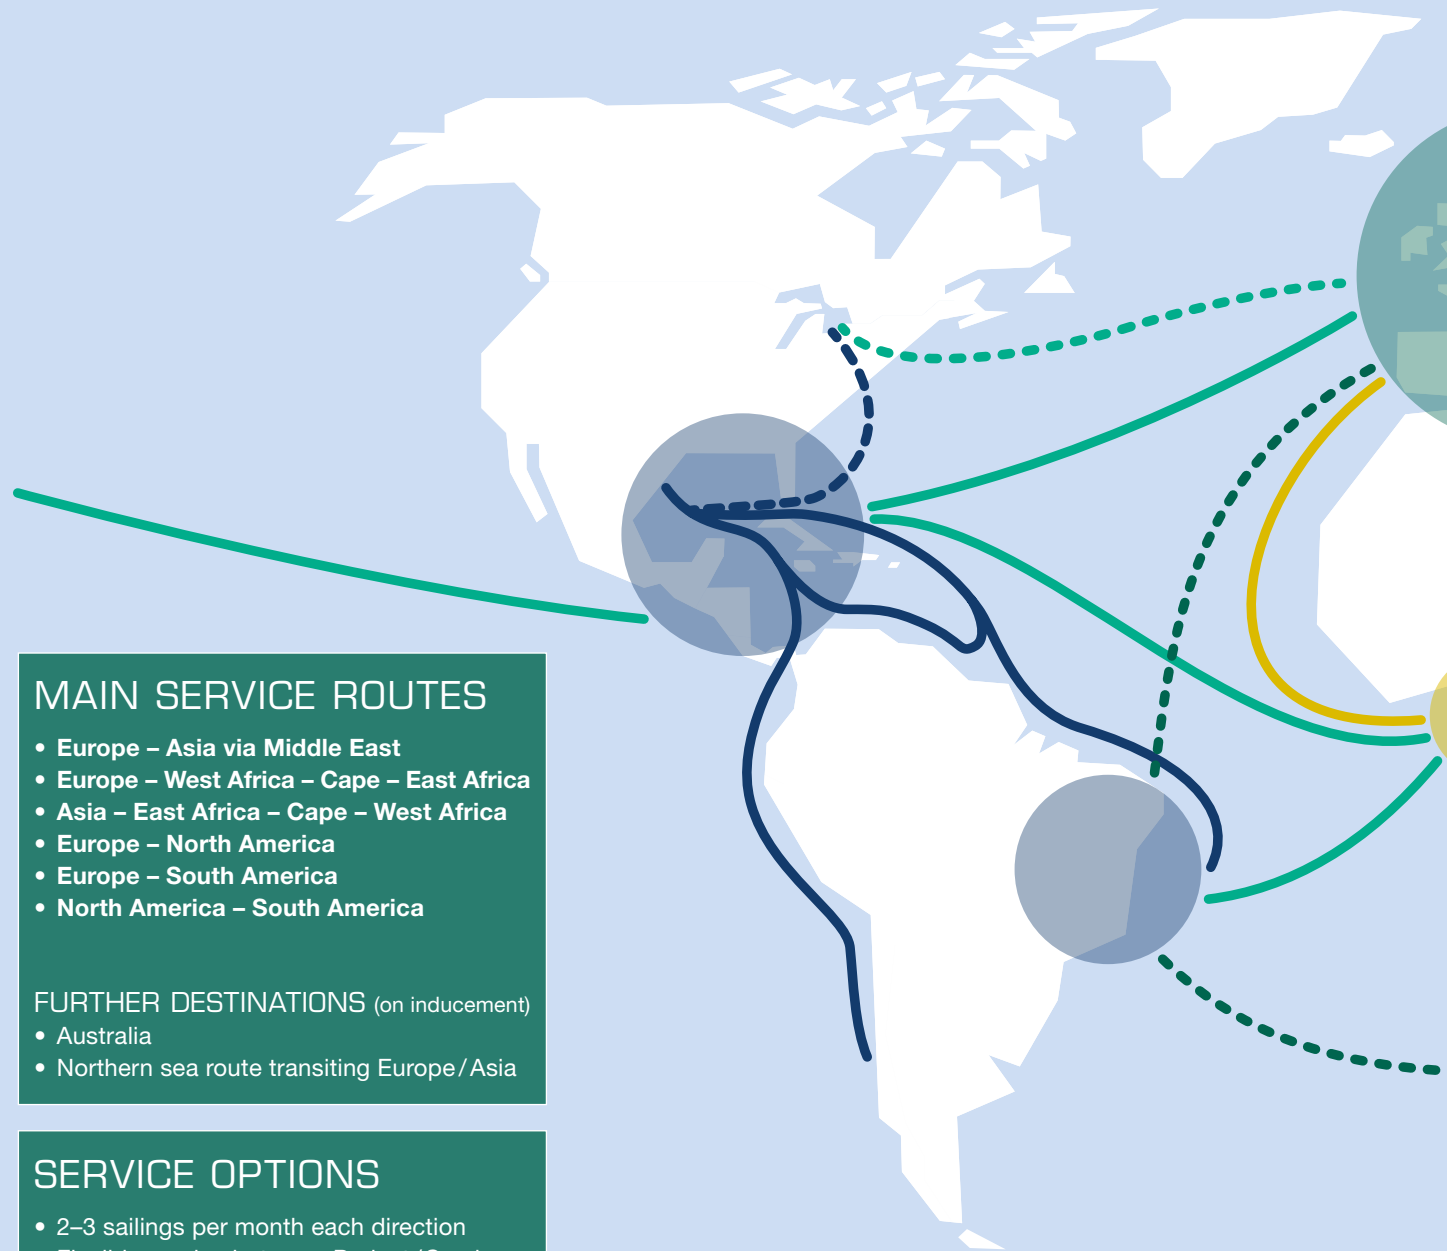

- Europe – Asia via Middle East
- Europe – West Africa – Cape – East Africa
- Asia – East Africa – Cape – West Africa
- Europe – North America
- Europe – South America
- North America – South America

FURTHER DESTINATIONS (on inducement)

- Australia
- Northern sea route transiting Europe/Asia

SERVICE OPTIONS

- 2–3 sailings per month each direction
- Flexible service between Project / Semi-Liner (i.e. full cargo and part cargo option)
- Secondary ports/remote port access

- Africa service route
- SAL NC / Asia semi-liner trade
- Intermarine Intra-Americas liner service
- SAL cross Atlantic / Pacific trade into Americas
- ... Further destinations

MARINE PROJECTS

SAL offers a port-to-port Project Service and port-to-site service (e.g. feeder service) worldwide – providing tailor-made transport and installation solutions to our clients. With this service SAL aims to meet client needs and to design innovative, efficient and flexible solutions for the safe and secure transportation of heavy and time-sensitive cargo, backed by our long-standing competence and engineering expertise.

OFFSHORE SUPPORT

The growing challenges of meeting worldwide energy demands have led major oil and gas producers to increase exploration with a heavy emphasis on offshore infrastructure. With this global development, SAL has become increasingly involved in providing transportation and installation solutions to complex offshore oil, gas and renewable projects.

OUR SOLUTIONS

»ENERGY

Energy is what drives the world. From refineries and petrochemical plants to oil and gas installations – all come in great varieties and increasing sizes. They require challenging transport solutions. We know how to handle it. We carry large reactors on our unobstructed decks. We place huge carousels on our vessels, spool them with kilometres of umbilicals and hand them over to installation vessels. We load complex modules in our spacious holds. And our versatile vessels can also serve as installation platforms for your offshore development projects. We make energy our business.

■ KITCHEN LIGHTS UNIT #3

Vessel

MV Svenja, Type 183

Location

Cook Inlet, Alaska

Client-provided items (CPI)

Offshore development platform:

- Monopod
- Modular Support Frame (MSF)
- Topside
- Helideck

Weight

1000 t (Monopod)

700 t (Topside)

Dimensions

45 × 26 m (Monopod)

33 × 30 × 27 m (Topside)

Vessel modifications and deck equipment

- Temporary living quarters for 60 supporting team members
- 10 additional mooring winches
- 3D Sonar System

Scope of work

- Rent and installation of adjustable mooring system to guarantee accurate positioning in strong tidal currents
- Driving King Pile into seabed by hydro hammer
- Lowering of Monopod to seabed (delivery by barge, additional preparations on deck)
- Installation of Topside and Helideck

Specials

- Strong tidal currents
- US Jones Act: vessel was not allowed to move as soon as American cargo was hanging on the cranes
- Topside could only be lifted during high tide with an extremely tight single hook lift with very small tolerances
- Highly technical and complex installation of the offshore platform

OUR SOLUTIONS

REFINERY AND PETROCHEMICAL COMPLEX PROJECT, VIETNAM ◀

Vessels	MV Lone, Type 183, Type 176 vessels, Type 161 vessels
Cargo	<ul style="list-style-type: none">• Risers, Strippers, PP Splitters, Debutanizers and Deethanizers• Units weighing up to 1 100 t each, longest item: 95 m

Weight	1 230 t (bullet), 5 422 t in total
Dimensions	60 × 9 × 12 m (bullet), 29 000 m ³ in total
POL	Masan, South Korea
POD	Sohar, Oman

OUR SOLUTIONS

»RENEWABLES

We support the diversification of world-wide power supplies – no matter if onshore or offshore. Our spacious vessels make the perfect solution for the transportation of monopiles, transition pieces, blades or any other wind farm equipment. We are experts in finding tailor-made, cost-effective solutions for your transportation needs. And with a 20 knots sailing speed, we are the perfect partner to match your tight project schedule.

THE TALLEST & THE HEAVIEST

Transition Pieces, Monopiles,
tower sections and blades

“The cooperation between VanOord and SAL has been excellent – in particular because we needed SAL to comply with our extremely tight construction program. And SAL has proven that they can do the job.”

Floren Verweij, Project Manager,
Van Oord Offshore Wind Projects BV

■ TRANSITION PIECES & MONOPILES

Vessel	MV Svenja, Type 183
Cargo	87 Transition Pieces (TPs), 87 Monopiles (MPs)
Weight	Up to 561 t (TPs) Up to 1019 t (MPs)
Dimensions	Up to 33 m long, Ø 7.44 m (TPs) Up to 72.56 m long, Ø 8.4 m (MPs)
Total volume	239 366.46 m ³ – 44 935.80 t (TPs) 310 660.70 m ³ – 62 018.32 t (MPs)
POL	Rostock, Germany / Teesport, UK / Aalborg, DK
POD	Belfast, UK
Specials	<ul style="list-style-type: none"> • Tallest and heaviest TP's currently in the market • Two different cargoes alternating in one voyage, vessel mobilized twice • Long-term employment with several consecutive voyages over about ten months

What began in 2010 with the delivery of foundations for the first Walney Offshore Wind Farm concession was successfully continued in 2017: MV Svenja played a fundamental role in the third extension of the Walney Offshore Wind Farm, located in the North West of the UK. The vessel transported a total of 87 Monopiles (MPs) from Rostock to Belfast. In addition, 87 Transition Pieces (TPs) were carried from Tees and Aalborg to the project harbor. With a height of up to 30 metres, a diameter of more than seven metres and a single weight of up to 561 tons, the TP's are amongst the largest ever built – a job that kept MV Svenja busy for almost a year. This long-term project was characterized by several challenges: Two different types of cargo, each requiring its own mobilization setting on board, which had to be shipped alternately, a tight schedule from customer side demanding flawless workflows for a pinpointed delivery from

■ TOWER SECTIONS & BLADES

Vessel	MV Annegret, Type 161A
Cargo	40 Tower Mid Sections (TMS), 40 Tower Top Sections (TTS), 24 Blades (B)
Weight	125 t (TMS) 119 t (TTS) 55 t (B)
Dimensions	30.7 × 7.5 × 7.2 m (TMS) 33.7 × 6.6 × 6.2 m (TTS) 82.5 × 6.7 × 6.0 m (B)
POL	Aabenraa & Esbjerg, Denmark (towers) Nakskov, Denmark (blades)
POD	Belfast, UK
Specials	<ul style="list-style-type: none"> • Consecutive shipment • Blade length of over 80 metres • Tight storage of blades

three different loading ports, and a special sea-fastening system which had to be designed to cope with the cargo variety and to ensure quick handling, even during the harsh North Sea winter weather conditions.

While MV Svenja was busy delivering MP's and TP's, MV Annegret got ready to transport tower sections and blades from Nakskov, Aabenraa, and Esbjerg in Denmark. In a total of eleven voyages, MV Annegret transported 40 tower mid sections, 40 tower top sections and 24 blades. A single voyage contained either ten tower sections or eight blades. Due to their length of over 80 metres, the blades became quite a challenging cargo that demanded every centimeter of space on board the vessel. Stowed in the lower hold and in two layers, the blades had an all-in-all distance of only 500 millimetres to the forward and engine bulkhead. A challenge that has successfully been met by our experts.

OUR SOLUTIONS

■ VEJA MATE OFFSHORE WIND FARM

Vessels	MV Trina, Type 176
Cargo	<ul style="list-style-type: none">• 67 Transition Pieces• Anode Cages• Additional cargo

“The commitment of SAL Heavy Lift to HSE, quality, workmanship, and eagerness to complete the project correctly and within the allotted schedule is greatly appreciated.”

Pieter Poelsma, Manager Transport & Logistics, OWF

■ BLADES, NACELLES, HUBS ETC.

Vessels	MV Paula, Type 161A MV Annemieke, Type 161
Weight	Up to 73 t
Dimensions	Up to 49.62 × 3.27 × 3.26 m (blades)
POL	Shanghai & Taicang, China Esbjerg, Denmark
POD	Akita, Japan
Specials	Transportation of several nacelles, hubs, blades and transformer units, as well as cooling towers, elephant foot, rotor yoke and containers

■ WIKINGER WIND FARM – TEST PILE CAMPAIGN

Vessel	MV Lone, Type 183
Location	German sector of the Baltic Sea, north-east of the island of Rügen
Client-pro- vided items	Nine piles, largest: 36 m long, diameter approx. 1.4 m, weight up to 47 t
Max. lift weight	165 t (piling frame and hydro-hammer)
Vessel modifica- tions	<ul style="list-style-type: none"> • Piling frame (“Triplex Template”) • Piling hammer and follower • Testing beam • WROV • Tugger winches • Temporary accommodation units
Scope of work	<ul style="list-style-type: none"> • Phase I: Installation of nine test piles at three locations at water depths of up to 40 m • Phase II: Restrike and pull out tests

OUR SOLUTIONS

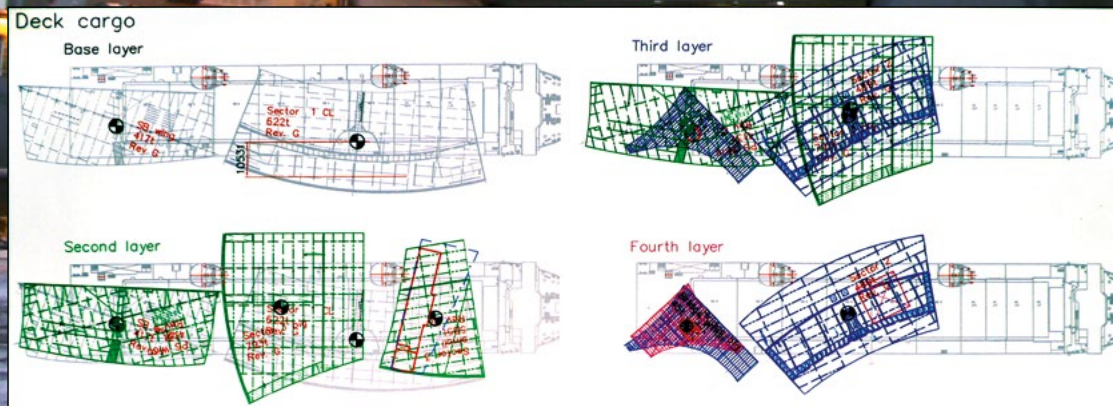

»INFRA- STRUCTURE

We have outstanding expertise in supporting port infrastructure construction. We transport and install ground piles and place platforms on them. We transport harbour cranes and shiploaders and install them directly onto the jetty. Often they don't even have to be dismantled for transport. We can lift and transport them in one piece. Innovative shipping brought to you.

“THE NORTH DECK”

Stacking eight pieces ...
and an overhang of 16 metres

■ BEACH PLATFORM

Vessel	MV Svenja, Type 183
Cargo	<ul style="list-style-type: none"> • Beach platform of over 10000 m² (6 modules) • Land bridge (2 pieces)
Weight	Up to 740 t
Dimensions	Up to 79 × 35 × 4 m
POL	Rauma, Finland
POD	Dubai, UAE
Specials	<ul style="list-style-type: none"> • Heaviest piece: 740 t and 52 × 44 × 4 m • Biggest piece: 640 t and 79 × 35 × 4 m • Total weight: 3500 t (all 8 pieces) • Overhang in the aft: 16 m • Special 26-metre lifting beams in use to load/discharge cargo

SAL has extensive experience in transporting infrastructure pieces from their place of manufacture to the project site, including even direct installation. Take for example the shipment of the enormous modular platform structure known as the “North Deck”, which was subsequently to become the luxurious beach deck of Dubai’s iconic Burj Al Arab hotel.

The platform structure was designed and manufactured in eight sections in Finland and had a heaviest piece of 740 tons and largest of 79 × 35 × 4 metres. No wonder then that to get the pieces to Dubai in one go, the enormous and irregularly shaped pieces had to be stacked three high on MV Svenja’s deck. This was a complex engineering challenge made more so by the need for support frames and sensitive load spreading equipment to deal with overhangs of 16 metres aft, 15 metres port side and 9 metres starboard. But after nearly two weeks of on-site preparation and loading activity in sub-zero arctic temperatures, all eight pieces were successfully stowed on board exactly as planned.

■ KARARA IRON ORE PROJECT ◀

Vessel	MV Svenja, Type 183
Cargo	5 wharf modules
Weight	Up to 700 t
Dimensions	Up to 54.25 × 19.10 × 4.57 m
POL	Sattahip, Thailand
POD	Geraldton, Australia
Specials	<ul style="list-style-type: none"> • Precision work: The modules were discharged directly onto stabbing piles • Challenging swell conditions

■ ICHTHYS LNG PROJECT ▶

Vessel	MV Svenja, Type 183
Cargo	LPG and LNG platform
Weight	up to 1320 t
Dimensions	up to 45 × 40 × 8 m
POL	Batam, Indonesia
POD	Darwin, Australia
Specials	<ul style="list-style-type: none"> • Overhang of 8.75 m • Exacting work with tolerances of less than 30 mm • Vertical tidal range of up to 7 m • Discharge directly to nine piled foundations

“The loading operation was characterized by great efficiency thanks to the intensive preparatory work and professional handling by SAL.”

Gregor Levold, Head of Shipping and Logistics, Liebherr

■ TWO MOBILE HARBOUR CRANES ▲

Vessel	MV Trina, Type 176
Weight	540 t each, plus accessoires
Dimensions	75.35 × 17.00 × 47.90 m
POL	Rostock, Germany

OUR SOLUTIONS

»MARINE

Taking a boat out of its natural element – water – comes with its challenges. Years of experience have helped us to become a reliable and competent partner in shipping marine cargo. We not only have knowledge of special loading techniques for yachts, tugs, catamarans, ferries, dredgers or even pontoons and barges – we will also handle them with particular care. We make sure your boat is safe standing on our deck. Whatever challenge – our solution.

NINE YACHTS – A CASE STUDY

MARINE

SUPER YACHT TRANSPORT

Nine yachts,
the largest 56 metres long,
weighing 775 tons

“Transporting very large superyachts on a lift-on, lift-off basis asks for outstanding equipment and crew. SAL’s very reliable vessels and its highly professional crew ensure smooth transport of the largest of yachts every time.”

Costa Thuring, Senior Loadmaster,
Sevenstar Yacht Transport

■ NINE YACHTS

Vessel	MV Regine, Type 176
Weight	Up to 775 t
Dimensions	Up to 56 × 10.6 m
POL	Several ports in the Mediterranean Sea
POD	South East Asia
Specials	<ul style="list-style-type: none">• Full deck• Extensive lifting gear with an overall weight of 95 tons• Particular care to be taken to not damage the sensitive cargo• Slight movements of vessel might have severe consequences on the behavior of the rigging during slinging process

Marine cargo transport is complex. Out of the water, vessels are sensitive and fragile. At SAL we know how to load, transport and unload your delicate marine cargo. From designing customized cradles for ensuring stable support up to the construction of special lifting frames and arrangements – we are experts in developing the right solution for you. All our vessels are equipped with special lifting gear for your sensitive cargo, and our experienced engineers and crew know what it will take to lift and tightly secure your valuable possessions.

An example of this was the transport of nine yachts on deck of MV Regine from several Mediterranean ports to South East Asia. The dimensions of the yachts ranged from 12 metres in length up to a 56 metres motor yacht weighing 775 tons. The loading of the yachts, especially of the longest one, was a complex procedure which we successfully performed in close cooperation with Sevenstar Yacht Transport.

SAL'S INDEPENDENT SISTER COMPANY

SAL Engineering provides comprehensive marine engineering services. We do not only develop concepts – we implement our solutions.

www.sal-engineering.de

OUR PEOPLE – ENGINEERING

SAL ENGINEERING GMBH

- Services available independently from SAL Heavy Lift's transport
- Naval Architects, structural and mechanical engineers, master mariners and draftsmen

Engineering

- Load and lift designs
- Hydrodynamic calculations
- Structural engineering
- Development of lifting tools

Consultancy

- Design reviews
- Installation concepts
- FEED studies, etc.

Site support

- Survey services for on-site cargo operations
- Damage and incident assessments
- Condition surveys
- Technical dockyard assistance

- IN-HOUSE ENGINEERING TEAMS
- CUSTOM-MADE SOLUTIONS

To accommodate the unique requirements of our clients, SAL's engineering teams provide individual and innovative solutions for heavy lift transport and installation operations. An experienced team of structural engineers, naval architects, master mariners, hydrodynamic specialists and welding experts provides a wide range of services to ensure safe and efficient operations, such as:

- CAD modelling in 2D and 3D
- Lift engineering according to latest standards and guidelines
- Integrated finite element analysis (FEA) and design of sea fastening, deck and support structures
- Planning of weather-restricted sea transportations of size and weight critical cargo including on-board motion monitoring
- Ship motion studies, dynamic lift analysis, installation analysis and mooring analysis using OCTOPUS OFFICE, Orcina OrcaFlex and WAMIT

The teams consider the most practical, sophisticated, cost-effective solution(s) in close cooperation with our crews on-board the vessels, our clients, and warranty surveyors. To ensure thoroughly engineered and well documented solutions, our experts are involved in all project stages from inception and planning through to on-site realisation. This in-house expertise allows us to master the most technically challenging projects.

*Specially designed lifting tool
for Transition Pieces ►*

QHSE POLICY

SAL Heavy Lift GmbH & Co. KG aspires to be the preferred carrier in the heavy lift shipping industry by providing our clients with an excellent quality service in every aspect of our operations, creating a safe working environment for people and minimizing our impact on the environment. SAL is committed to the prevention of all incidents, injuries, occupational illnesses to all our interested parties. SAL is equally committed to the protection of the environment and to adopt a safe and efficient operating process in managing our business.

SAL fully complies with and maintains ISO 9001:2015, 14001:2015, 45001:2018, ISPS, MLC and ISM certifications.

You can read the whole SAL QHSE policy here:
www.sal-heavylift.com/qhse-policy

OUR PEOPLE – QHSE

QUALITY, HEALTH, SAFETY & ENVIRONMENT

The management of SAL is committed to ensuring healthy, injury-free workplaces and minimizing their impact on the environment. All of our staff are committed both to ensuring their own safety and to protect the environment.

OPERATIONAL EXCELLENCE IN QHSE

In line with our SAL QHSE policy, our Quality and Safety department strives for the implementation of the highest QHSE standards in our fleet. The culture of safety at SAL not only includes three key aspects – people, processes and tools – but also focusses on closely monitoring projects from the planning stages all the way to successful completion. Regular risk assessments, toolbox talks and the maintenance of critical equipment to optimize safety during loading, sea passage and discharge are part of our QHSE policy – aiming to fulfill the needs of your sensitive heavy lift cargoes.

OUR PEOPLE – CREWING

- IN-HOUSE TRAININGS
- HIGHLY SKILLED CREWS
- SPECIALISED CRANE DRIVERS
- INTERNATIONAL SEAFARERS
- CLOSE RELATIONSHIP BETWEEN GERMANY AND PHILIPPINES

Much of the success of SAL is down to the competence, experience and dedication of the vessels' crews. SAL is committed to offering opportunities for career advancement and longevity in employment. In addition, SAL provides comprehensive family and social services. All Masters have a strong background in heavy lift shipping, supervising the crew where some are with SAL in their second generation.

QHSE TRAINING AND AWARENESS

Comprehensive training programs are run regularly to keep our shipboard teams fully informed about the latest QHSE practices. As quality reflects in everything we do, SAL is also committed to the prevention of all incidents, injuries, occupational illnesses to our employees and contractors. Therefore we follow eight SAL Safety Values, making a step towards zero tolerance of incidents and safety breaches.

OUR FUNDAMENTAL VALUES

Our values define what we believe in as a company and as employees. It is this fundamental belief that guides us to realize our vision.

Our vision statement defines what we are aiming for as a company – you may call it the leading star for all of us – what we want to achieve:

**To become the industry reference
for diversified Marine Transport
and Engineering.**

*“SAL shall be a happy
and inspirational place
to work and a seat
of knowledge and
education.”*

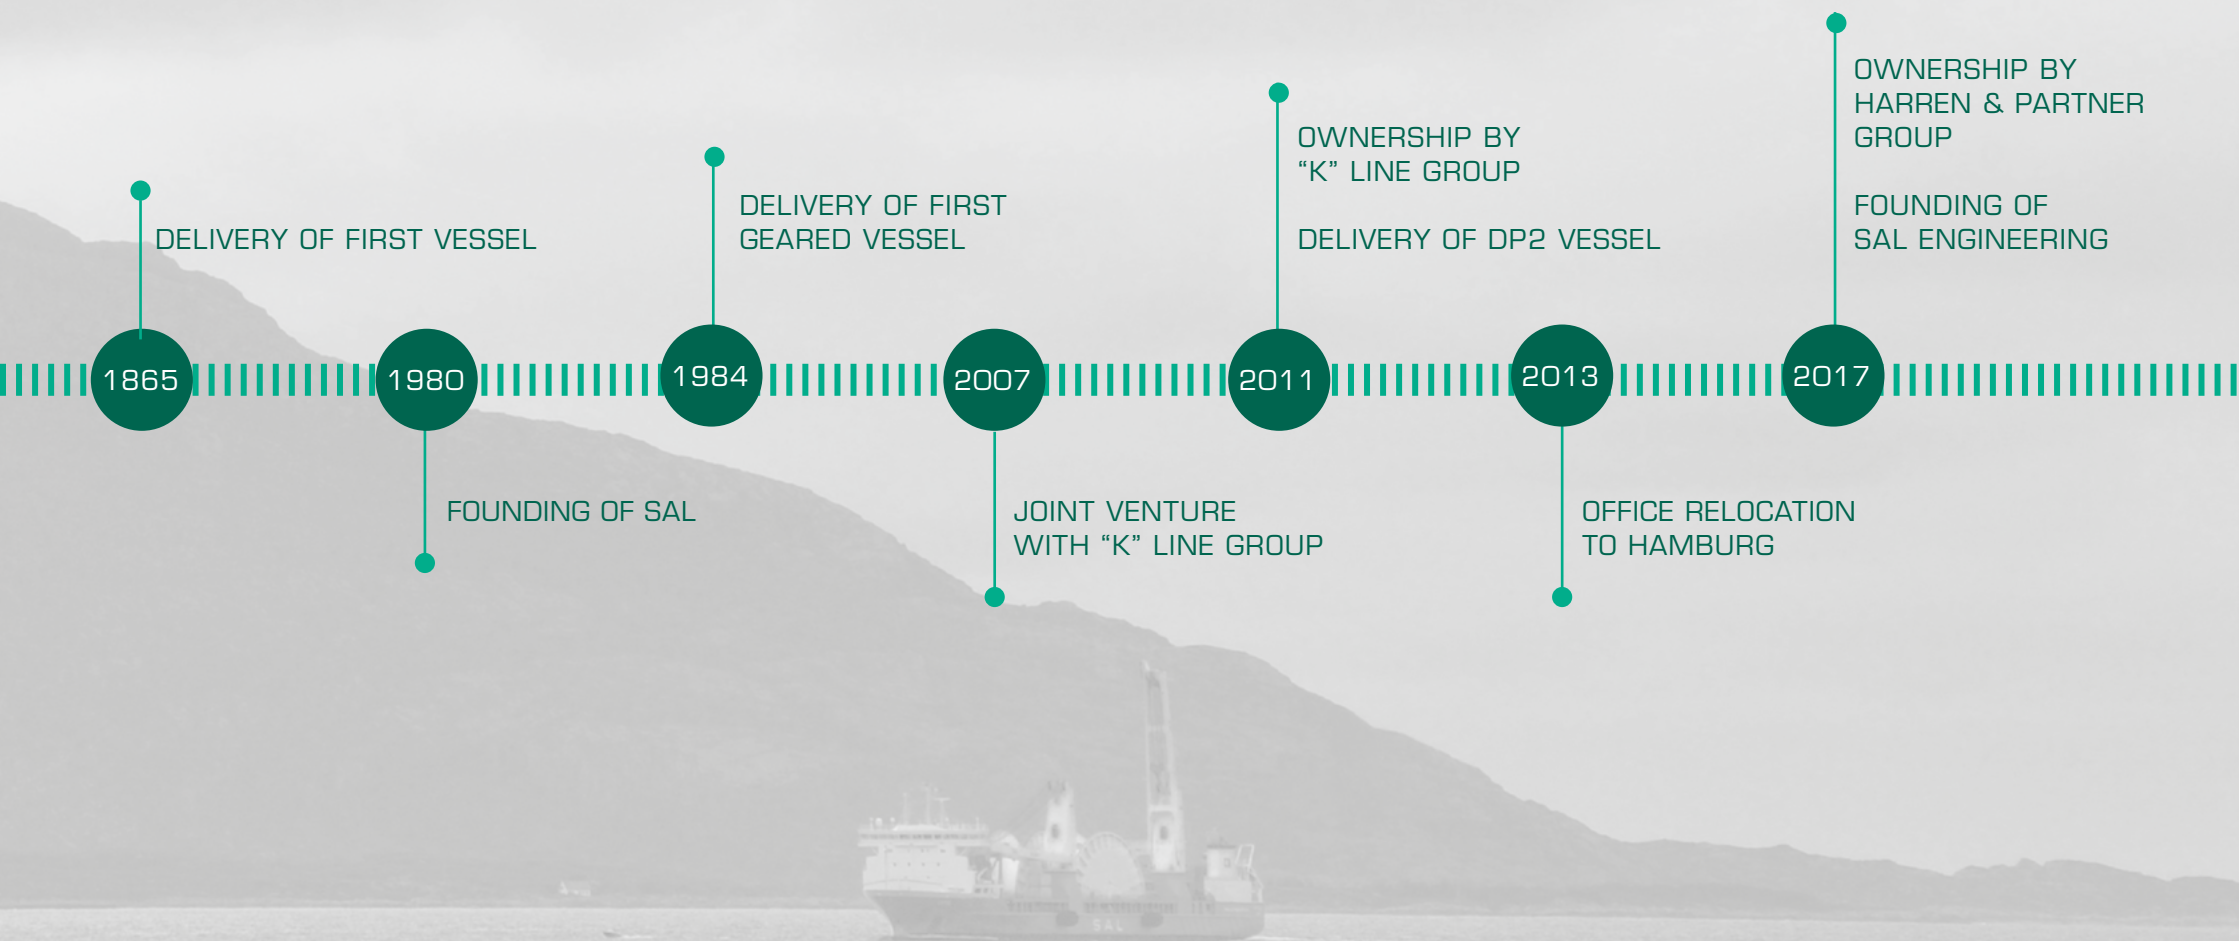

Dr. Martin Harren,
Managing Director and Owner

HERITAGE AND CONTINUITY

At SAL we are proud of our heritage! Based on our long lasting experience in heavy lifting shipping, we are able to deliver a continuous service to our customers – a heavy lift shipping service since 1980 and a shipping heritage since 1865.

Your request – our solution.

OUR FLEET

OUR FLEET – MODERN AND FAST

Our modern fleet of heavy lift vessels lets us offer our clients highly flexible options.

Our vessels are characterized by a lean structure and therefore boast an impressive transit speed of up to 20 knots. They also feature up to 3500 square metres of unobstructed main deck space and combined crane capacities ranging from 550 to 2000 tons. Our Type 116 vessels are equipped with ice class and a crane capacity of 900 tons.

All SAL vessels have an extensive range of cargo handling equipment including spreader bars, lifting beams, slings, shackles, and materials for lashing and securing items. All onboard equipment is approved by DNV GL (or equivalent).

DOCK VESSELS AND DECK CARRIERS, SEMI-SUBMERSIBLE

SAL offers via its exclusive partners Ro/Flo services to customers worldwide. With industry-leading Dock and Deck carrier vessels, SAL is capable of offering a full scope heavy marine transport solution for ultra large and ultra heavy units.

A VERSATILE MARINE PLATFORM FOR INSTALLATION AND TRANSPORTATION

DP II Heavy Lift Vessel MV Lone

FLY-JIB: MORE CRANE HEIGHT, GREATER OUTREACH

Short configuration:

13 metres, maximum SWL of 625 tons

Long configuration:

23 metres, maximum SWL of 500 tons

DYNAMIC POSITIONING

With its latest generation of high capacity Type 183 vessels, SAL Heavy Lift introduces a crane capacity of 2 × 1000 tons SWL. In addition, both heavy lift vessels are equipped with a class-leading Kongsberg Dynamic Positioning System: While MV Svenja is equipped with a DP I system, MV Lone has a DP II system providing more redundancy for safe offshore operations.
